

Making the most of the space

Office space is usually at a premium in all types of public environments and it is crucial to comfortably accommodate the workforce and adequately store materials and personal effects. Fundamental to this is the integration of technology—the image above illustrates a fitted wall storage installation but also shows how not to create PC workstations!

Fitted desking not only makes the most out of the available floor plan but also cable manages the computer interface within the furniture. More seating positions can be attained ergonomically than using traditional loose desking, particularly important in educational areas where write-up work is carried out.

Image is usually important and natural materials are often employed. Real wood veneers always give a “fit for purpose” appeal and we can advise on cost effective solutions which will match the interior scheme. Worktops can either be supported on our powder coated tubular frame system, giving ultimate flexibility for storage/kneespace below or directly mounted onto a range of cabinets which can integrate filing and insert trays.

Your office space says a lot about your corporate identity. **Network** will make it look like you mean business!

Image A – Confined Spaces

- Optimised use of space for administrators
- Detailing and materials to suit Georgian interior
- Flexible storage options to suit variety of items
- Made to measure cabinetry can use entire wall space
