

## hospital/medical

### **At the cutting edge of healthcare!**

Healthcare is prominent in political thinking and there is always a constant program of development of infrastructure to improve existing or create new facilities. Whether a building houses treatment, research or teaching areas, we can provide furniture fitments to suit.

Vitally important public spaces demand critical design consideration and through wide experience, we can propose solutions which will be guaranteed "fit for purpose": reception counters, nurse call stations, bedroom fitments, wash-up areas, special equipment storage, patient lockers, consulting rooms, path labs, medical training faculties are all within our remit.

Strict performance criteria must be met and governing standards such as HTM63 control the quality of output. We embrace the specifications and add our knowledge of design, ergonomics, best use of materials, expert fitting and overall project management to provide a service which is matchless.

**Network** appreciates the complexity of this sector and offer our expertise to review outline proposals and translate them into working practice.

**Image A – Health Centre, Carmarthen**

- Primary care building serving local community
- Installation comprised various fitments for practical use
- All units designed to Health Technical Memorandum 63
- Colour scheme to create clean clinical image
- Special storage units available for equipment containment

**Image B – Medical Clean Rooms, Pencoed**

- Staff access changing seat benches to clean room facility
- Part of major new medical testing kit production unit
- Testing and quality control laboratories installed
- Staff medical rooms undertaken as part of our package.
- Specially designed operator benches created for analysers

**Image C – Pathology Teaching Lab, Bristol University**

- Refurbished wing of main building furnished in 2000
- Creation of undergraduate medical teaching faculty
- Benching installed on four floors in large laboratories
- View of Histology benching designed for microscopy
- Four separate medical disciplines each with its own design

**Image D – Ward Furniture, RNRHD, Bath**

- Installed in wards in an historic building in the centre
- Program to overcome potential hospital acquired infections
- *Corian* solid surface worktop specified
- Fitments designed from materials which are integrally sealed
- Nurse station areas also installed as part of project

**Image E – Singleton Hospital, Swansea**

- View of one of four Linear Accelerator Rooms
- Purpose built cabinet fitments in alcove area
- Storage designed to house special treatment kits
